

# Endpoint Solutions

*Connect and communicate  
no matter where you are or  
what device you are using.*

# Inter-Tel Endpoints

Shipton Communications offers a diverse and comprehensive range of Inter-Tel endpoints to cater for even the most demanding communication solution. As technology evolves people are changing the way they communicate and Shipton constantly strives to deliver the latest technological advances to the desktop.

**Basic to advanced functionality:** The complete range of endpoints covers features for users who require just the basic operation of a telephone, to the more advanced users who need extended functionality and access to more powerful features such as Computer Telephony Integration (CTI), Interactive Voice Response (IVR), Unified Messaging and much more.

**Solutions to fit your business:** Many organisations have widespread business landscapes, extending far beyond the main office with the onset of telecommuting, remote workers, satellite offices and warehouse facilities. Inter-Tel can help cultivate your dynamic business environment with its collection of feature-rich endpoint solutions.

Inter-Tel's endpoints are exclusively designed to empower your resources, while maximising the return on your converged communications investment. Whether you require IP-based phones, digital office phones, or software-based phones, Inter-Tel's suite of endpoints delivers the flexibility your organisation needs for onsite employees and remote users to perform their functions with continuity.

# Feature Access & Functionality

**Versatile endpoint solutions:** Inter-Tel's endpoints provide the same feature access and functionality across the full range. Whether users have a desk endpoint, a softphone running on their laptop, or a wireless endpoint, the extensive array of features provided by an Inter-Tel solution can be accessed through the same screen-based menus, feature codes and fully programmable feature buttons.

Menu access on the 8560

**One touch feature access:** The 8560 Executive endpoint utilises a powerful menu interface. The large six line by 16 character display leads you effortlessly through system features and capabilities. One touch access either from the screen menu or the programmable feature keys to:

- Voice mail
- Internal/external directories
- Missed/Dialled/Received call lists
- Do-Not-Disturb (DND) settings
- Call forward settings
- Mute
- Speed Dial
- Redial
- Conference
- Transfer
- And much more...

CLI presentation on the 8520

Programmable feature keys

## Access call logs:

Missed, dialled and received call logs can be searched quickly and easily.

## Intelligent Directory Search:

Quickly search through internal or external directories via the alphanumeric keypad. The directory will predict matches as they are typed.

S8622 Multi-protocol Standard

# Multi-protocol & Wireless

**Location, location, location:** Today's dynamic communications landscape requires multi-device options - from desktop phones to handheld PDAs, laptops and wireless endpoints. Inter-Tel extends its market leading applications performance to its wide range of flexible, mobile and easy to use communications endpoints. Regardless of location, the user has the same functionality and access to system features as if they were at their desk in the office.

S8602 IP Softphone Feature Access

**Multi-protocol desk endpoints:** The S8622 Standard and S8662 Executive multi-protocol endpoints are designed to operate on converged IP networks, such as the internet and corporate LANs/WANs in order to facilitate flexible working and remote office applications. Additionally, SIP mode enables IP endpoints to interoperate with third-party SIP solutions.

**Communications on the move:** Desk phone functionality is available wherever there is a link to the Internet. The S8602 IP Softphone shares the same features and functions as a 8660 Executive IP Endpoint but are accessed via the user's laptop or PC.

**Go Wireless:** Providing mobility for busy office professionals, the S8664 and S8665 wireless endpoints enable users to access Inter-Tel's extensive feature set within the 802.11 network of their enterprise. These endpoints offer superior voice quality, extended talk time and soft-key feature access.

Also allowing users to stay connected to the enterprise while mobile is the S8601 SIP PDA Softphone. Users can access all system features via Pocket PC within a 802.11 wireless network.

S8664 Wireless Endpoint Screen Menu Access

## Session Initiation Protocol (SIP):

*Designed to provide interoperability and enhanced services, SIP connects a wide variety of multimedia endpoints and applications together in a standard format.*
